From the usual to all Google Play, this program differs primarily in the fact that all games and programs in the repository are absolutely free. The project is developed by enthusiasts who for some reason are not satisfied with the cost of modern applications in the official store. The principle of operation is not much different from the same Google Play or Amazon Appstore. The user finds a specific product among the thousands available, and installs on the device with one tap. The interface Blackmart is simple and straightforward even for a beginner. At the very top, to the right of the icon, there are two tabs - applications and device. The first one contains a database of games and programs available for downloading, the second one displays a list of installed applications. In the upper right corner you can find a search that, by the way, supports voice commands as well as an extended menu. The program does not have any settings, and only in recent versions have developers introduced the ability to change the color of the interface to dark or black. The main category is divided into subcategories for more comfortable navigation in preferred genres. The material page contains a description, user rating and size of the application. It did not do without the update / delete functions that are available from the menu of installed games and programs. In general, Blackmart is a full-featured store for smartphones and tablets, the application database of which is constantly growing. This software will be indispensable if the user decides to use alternative firmware without GAPPS pre-installed. The disadvantages include a relatively small number of available games and programs, as well as unstable servers.
